

MEN CAN GET HIV THROUGH THEIR COCKS

During anal sex, HIV can enter the bloodstream through the absorbent head of the cock. **Condoms stop this.**

HIV can also get in through tiny cuts in the foreskin. For more about how HIV is passed on, check out www.gmfa.org.uk/cocksure

For more on HIV and sexual health:

THT DIRECT > 0845 12 21 200

Funded by the Pan-London HIV Prevention Programme. Terrence Higgins Trust is a registered charity in England & Wales (no.288527) and in Scotland (no.SC039986).
