

Down About Not Getting it UP?

Loss of sexual drive and difficulty getting a **hard-on** can be a problem for anyone, but if you're **HIV positive** it can be more of a problem, **for different reasons...**

- *HIV drugs can cause **loss of feeling** in the groin and contribute to lowered sex drive.*
- **Anxiety & fear** of transmitting the virus or being rejected.
- *Sexual problems can be the result of **low testosterone levels**, often found in men with HIV.*
- *HIV can **damage the nerves in the cock**, causing impotence.*
- *Loss of sex drive **can lead to depression**.*

Don't put UP with IT!

There are several options for you to do something about it.

Speak to one of the staff at your HIV clinic

or visit www.metromate.org.uk/erection for more information

or call one of the following sexual health counselling services, where you can arrange to talk to someone: PACE on (020) 7697 0014, HGLC on (020) 7407 3550 or THT on (020) 7835 1495.

All of GMFA's campaigns are designed, planned and executed by positive, negative and untested volunteers.

If you are interested in volunteering for GMFA, write, phone or e-mail:

Unit 42, Eurolink Centre, 49 Effra Road, London SW2 1BZ

(020) 7738 6872 Charity No. 1076854
