

HIV

ANAL CANCER

HIV positive smokers are more likely to get anal cancer than HIV negative smokers.

HIV positive people are more likely to develop anal cancer than HIV negative people. Smoking increases this risk even further.

For more information visit www.gmfa.org.uk/hivsmoking

GMFA runs free smoking cessation courses specifically for gay men which, along with nicotine treatment, have proven to be more effective in helping you stop smoking than any other smoking cessation method. To book a place, go to www.gmfa.org.uk/stopsmoking Other help can be found through the NHS Smoke Free initiative at www.gosmokefree.co.uk

GMFA projects are developed by positive and negative volunteers. To volunteer or donate call 020 7738 6872 or go to www.gmfa.org.uk. Charity number 1076854.
